

Form Submission Automation

Great News! We've automated even more from a form submission! Upon a user or administrator pressing submit on a form, our system can now take the information in the form perform key actions:

What's Automated

1. Map elements and details directly from the form into a Custom Field in a User Profile
2. Create a Note directly from the form AND attach any uploaded file in the form to that note.
3. Send an email directly from the form submission AND attach any uploaded file in the form to that note.
